### Cleaning Coins And Artefacts Conservation Restoration ...

Coins are struck, therefore more dense than embossed, or cast metal. I've done a bit of plating and stripping, and yes, look at a typically electrostripped casting, old, or new, and if you look close, you can almost see the micro-crystalline lattices, which cast metal can get, in solidifying, because the thing was fried with too much juice, and more likely, the wrong solution.

### Antiquities Cleaning, Restoring and Conservation

Silver artifacts are ready to be electrolytically cleaned after any encrustation has been removed with a small pneumatic chisel, and the artifacts have been thoroughly rinsed. Small specimens can be set up as shown in Figure 13.1. This setup is designed to clean coins, but it is applicable to any small silver or other non-ferrous metal objects.

### **Cleaning Coins And Artefacts Conservation Restoration ...**

Not that long ago, a museum colleague was heard to say "I suppose cleaning counts as conservation" in a doubtful voice. We conservators found this both appalling and amusing as cleaning is a huge part of what we do. And knowing when and how to clean is a big part of our education. Using the wrong methods can permanently damage an artifact.

### **cleaning | In the Artifact Lab**

And said purpose is to clean coins in order to: 1. Remove most or all encrustations on the coin so that the original designs and legends are visible again, if they are still there, and always without damaging the patina or the metal, and 2. Conserve the coin so that the decaying processes are reduced as much as possible, thus
