Factoring To solve an quadratic equation using factoring :

- 1 . Transform the equation using standard form in which one side is zero.
- 2 . Factor the non-zero side.
- 3 . Set each factor to zero (Remember: a product of factors is zero if and only if one or more of the factors is zero).
- 4 . Solve each resulting ...

Solving Quadratic Equations using Factoring

This page will try to solve a quadratic equation by factoring it first. How does this work? Well, suppose you have a quadratic equation that can be factored, like $x^2 + 5x + 6 = 0$. This can be factored into $(x+2)(x+3) = 0$. So the solutions must be $x = -2$ and $x = -3$. Note that if your
