Sound waves travel through the air. Sound waves are caused by vibrations. Since air is made of particles (matter), it transports sound very well. When a speaker vibrates it creates longitudinal waves that travel in ALL directions. You can easily see how speakers create vibrations by sprinkling something small and light, like salt, onto a speaker.

1. Describe how a vibrating object produces sound waves. (2 marks) Sound is produced by vibrating sources placed in a medium. When the object (e.g. ruler or tuning fork) vibrates, a series of compressions (high air pressure) and rarefactions (low air pressure) are produced by shifting of air layers. In doing so, a longitudinal wave is produced.
