The Language of Life: DNA and the Revolution in ...

DNA: The Language of Life. DNA molecules are two-stranded structures that consist of phosphates, sugars, and bases arranged in a chain. There are four different bases: adenine (A), thymine (T), guanine (G), and cytosine (C). These bases are paired on either side of the molecule and only bond with their like pair, adenine to thymine and guanine to cytosine.

DNA: The Language of Life

In this short chapter you will learn how modern molecular biologists manipulate DNA, the blueprint for all of life. The four letter alphabet (A, G, C, and T) that makes up DNA represents a language that when transcribed and translated leads to the myriad of proteins that make us who we are as a species and as individuals.
