“The Theory of Heat Radiation’, it can be demonstrated that the German physicist was unable to properly justify Kirchhoff’s Law. At every turn, he was confronted with the fact that materials possess frequency dependent reflectivity and absorptivity, but he often chose to sidestep these realities.

In general, radiation is a volumetric phenomenon. This is because the electrons, atoms and molecules of all solids, liquids and gases above absolute zero temperature are in constant motion and hence energy is constantly emitted, absorbed and transmitted throughout the entire volume of the matter.
